

Introducing EnergyCel™

**Increases
Gas Mileage,
Engine Efficiency
& Performance!**

**Reduces
Maintenance
& Emissions!**

Features & Benefits of the EnergyCel™

- Increases fuel economy
- Increases engine efficiency, power and torque
- Reduces emissions
- Decreases RPMs
- Reduced vehicle maintenance expenses
- Extended vehicle life
- Simple installation on any vehicle
- No maintenance
- 25 years of research and development
- Patented design, made in USA
- Lifetime warranty, 60 day money-back guarantee

Benefits of Using the EnergyCel™

Using an EnergyCel™ on an internal combustion engine will have a variety of benefits depending upon a number of factors including: driving habits, terrain, size of vehicle, age of vehicle, road conditions and more.

Drivers everywhere who have installed an EnergyCel™ on their vehicles are exclaiming about an increase in miles per gallon, engine efficiency, power and torque. Because the engine burns the fuel more completely, maintenance is reduced and engine life can be increased. They're also impressed by the resulting decrease in emissions and lower operating RPMs.

EnergyCel™ will benefit all types of vehicles and engines. Users can expect a reduction of 5% to 10% fuel consumption, in some applications even more! The savings at the pump makes EnergyCel™ pay for itself in a short time for drivers of passenger cars, SUVs, trucks or any vehicle, gasoline or diesel. The savings can be very important to companies that operate fleets of vehicles where fuel cost is critical to their bottom line..

The EnergyCel™ is a revolutionary patented product that requires no maintenance, lasts the lifetime of the vehicle and is made in the USA.

How the EnergyCel™ Works

The EnergyCel™ is a patented device that contains bar magnets. The strong magnets, when assembled and installed around a fuel line, work together to generate a magnetic field. The magnetic field "treats" the fuel passing through the line on its way to the injectors or carburetor of the engine.

The magnetic field causes the "clusters" of fuel molecules to re-align and pull apart or expand. The expanded fuel provides a greater volume of fuel to feed into the atomizing process. It creates a finer spray of fuel mixed with air. This new "mix" burns hotter, thereby, burning the fuel more efficiently.

Installation is quick and easy. There are no moving parts to wear out and it comes with a lifetime guarantee.
